Linear Regression is a machine learning algorithm based on *			
 unsupervised learning supervised learning reinforcement learning none of these 			
Regression models a target prediction value based on *			
 dependent variable independent variables independent value dependent value 			
Regression technique finds out a linear relationship between x (input) and y(output) hence it is called as	*		
Hypothesis functionRelated regression			
Linear Regressionnone of these			

Which Machine Learning technique use for dealing Categorical data? *		
RegressionClassificationClusteringAll of the above		
How do you choose the root node while constructing a Decision Tree? *		
 "An attribute having high entropy "An attribute having largest information gain "An attribute having high entropy and Information gain None of the Mentioned 		
Choose a disadvantage of decision trees among the following. *		
 Decision trees are robust to outliers Factor analysis Decision trees are prone to overfit none of these 		

What is the term known as on which the machine learning algorithms build a model based on sample data?			
O Data training			
Training data			
Transfer data			
None of the above			
Machine learning is a subset of which of the following. *			
Artificial Intelligence			
O Deep learning			
O NLP			
None of the above			
The father of machine learning is *			
Geoffrey Everest Hinton			
Geoffrey hill			
Geoffrey chaucer			
Micheal Geoffrey			

Suppose you got a training accuracy of 90% and a test accuracy of 50%. What happened with your model	*
The model was over fitted with the training data	
The model was under fitted with the training data	
The model is absolutely fine	
None of the above
